Ceramic holder	150

DRINKERS

Nipple	70
Bell Drinker	700
Big Bell	1000

CHICKEN CAGES

96 Birds cage	30,000
128 Birds	35,000

EGGS INCUBATION GUIDE

When incubating eggs there are five key factors to bear in mind:

1. Temperature

The temperature must be sustained throughout the incubation period 37.5° C

2. Egg turning and positioning

This ensures that the embryo forms in the correct position for hatching.

3. Humidity

This ensures that the right amount of water is lost over time. It is important to remember that humidity will vary, and this is not a big problem: it is the average humidity that matters more.

4. Fresh Air

A fresh air supply is vital to egg incubation and hatching eggs.

5. Clean Environment

Eggs should be clean and disinfected before egg incubation begins to prevent bacteria which cause infection.

The most efficient and trust eggs incubators and poultry equipment supplier in East African Region.

Our incubator machines have 90% (Percent) plus in performance (guaranteed). We offer one year warranty, delivery and training for free.
